### Are BT throttling torrent/P2P downloads?

This is a problem I've only just discovered today.

I've tried to download some items via private trackers using both uTorrent and BitTorrent and I am experiencing extremely slow download speeds and difficulty connecting to peers.

Usually with the private trackers I get between 500kbps and 700kbps. Today I've been struggling to get 3kbps and so far it's taken 6 hours to download 20% of a 300mb file.

I've spoken to others using the same private trackers and they are experiencing no issues. My broadband speed for general web browsing and downloading of files has not been affected. The only problem I'm having is with the torrent software and downloading items from there.

The only conclusion I can come to is that there is an issue with my ISP and the use of torrenting software and anything connected.

Can anyone confirm if this is the case?
