

CONTENTS-		
Experiment Number	AIM OF THE EXPERIMENT	Page Number
1	To find focal length of convex lens by u-v method.	1-4
2	To determine focal length of convex lens by no parallel method.	6-7
3	To find focal length of convex lens by displacement method.	9-10
4	To find focal length of convex lens by no parallel method.	12-13
5	To determine focal length of a given convex lens with the help of an auxiliary convex lens.	14-15
6	To determine focal length of a concave lens using auxiliary convex lens, not in contact and plotting appropriate graph.	16-17
7	To determine focal length of concave mirror by using two pins (u-v method).	18-19
8	To find the refractive index of the material of convex lens by Boy's method.	20-22
9	To determine specific resistance of material of resistance wire from slope of potential difference versus current graph.	23-25
10	To determine the resistance of about 100 cm of wire using a metre bridge. Measure its length and radius and hence, calculate resistivity of the material.	26-28
11	To determine the EMF of a dry cell.	29-31
12	To set up potentiometer and draw calibration graph. Use it to measure unknown voltage.	30-31
13	To find value of unknown resistance using Wheatstone bridge principle.	32-33
14	To compare magnetic moments of two bar magnets by null method in end-on position, neglecting length of the magnets.	34-35
15	To compare magnetic moments of two bar magnets by null method, using deflection magnetometer in broad-side-on position.	36
