1. [Recommended](#)

Primary nameserver: ns3.google.com Hostmaster E-mail address: dns-admin.google.com Serial #: 144743510 Refresh: 900 Retries: 900 Expires: 1800 30 minutes Default TTL: 60	
❌	NSs have some SOA serial Looks like your nameservers do not agree on the SOA serial. The SOA records as reported by your nameservers: 216.239.36.10 -> 144743510 216.239.34.10 -> 144742888 216.239.32.10 -> 144743510 216.239.38.10 -> 144743510 This can cause some serious problems that is why you should fix this asap.
✅	SOA MNAME entry OK, ns3.google.com That server is listed at the parent servers.
✅	SOA Serial Your SOA serial number is: 144743510. The recommended format (per RFC1912 2.2) is YYYYMMDDnn, where 'nn' is the revision. Your SOA serial appears to be the number of seconds since midnight 01 Jan 1970 when the last DNS change was made. That seems to be 17476/3 1:31:50
⚠️	SOA REFRESH WARNING: Your SOA REFRESH interval is: 900. That is not so ok
✅	SOA RETRY Your SOA RETRY value is: 900. Looks ok
⚠️	SOA EXPIRE Your SOA EXPIRE number is: 1800. That is NOT OK
✅	SOA MINIMUM TTL Your SOA MINIMUM TTL is: 60. This value was used to serve as a default TTL for records without a given TTL value and now is used for negative caching (indicates how long a resolver may cache the negative answer). RFC2308 recommends a value of 1-3 hours. Your value of 60 is OK.
🔍	MX Records Your MX records that were reported by your nameservers are: 30 mx2.aspmv.l.google.com 74.125.200.26 50 mx1.aspmv.l.google.com 74.125.208.26 10 aspmv.l.google.com 64.233.184.26 40 mx3.aspmv.l.google.com 64.233.189.26 20 mx1.aspmv.l.google.com 173.194.220.26 10 aspmv.l.google.com 64.233.167.26 10 aspmv.l.google.com 74.125.133.26 10 aspmv.l.google.com 66.102.1.26
